

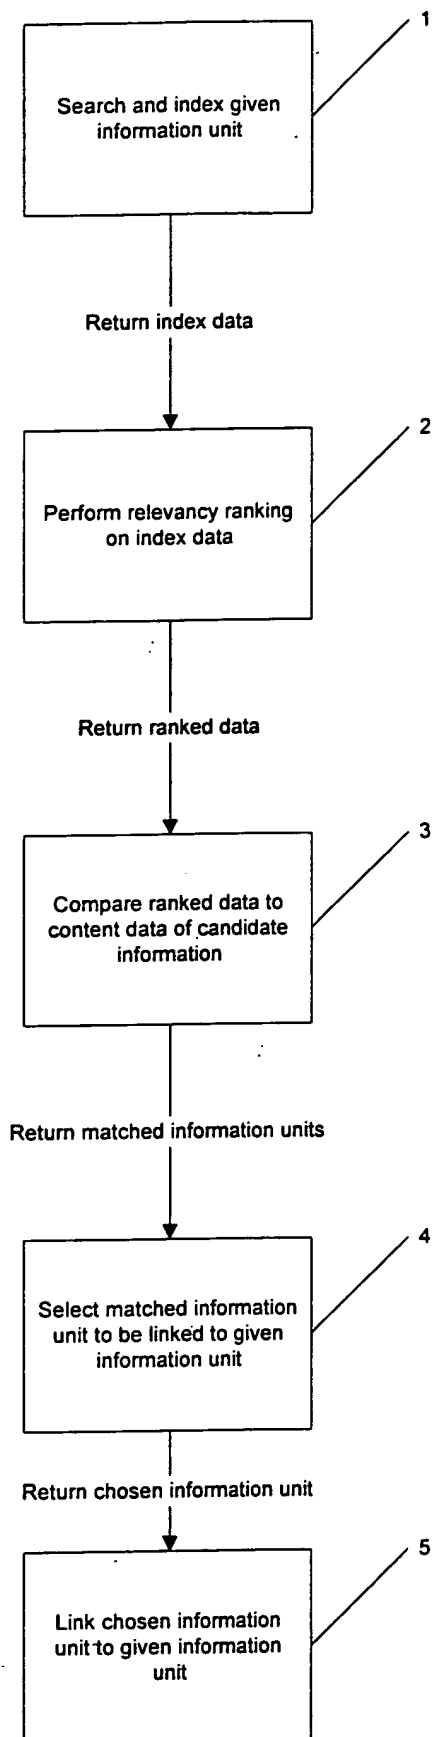

Figure 1

Figure 2

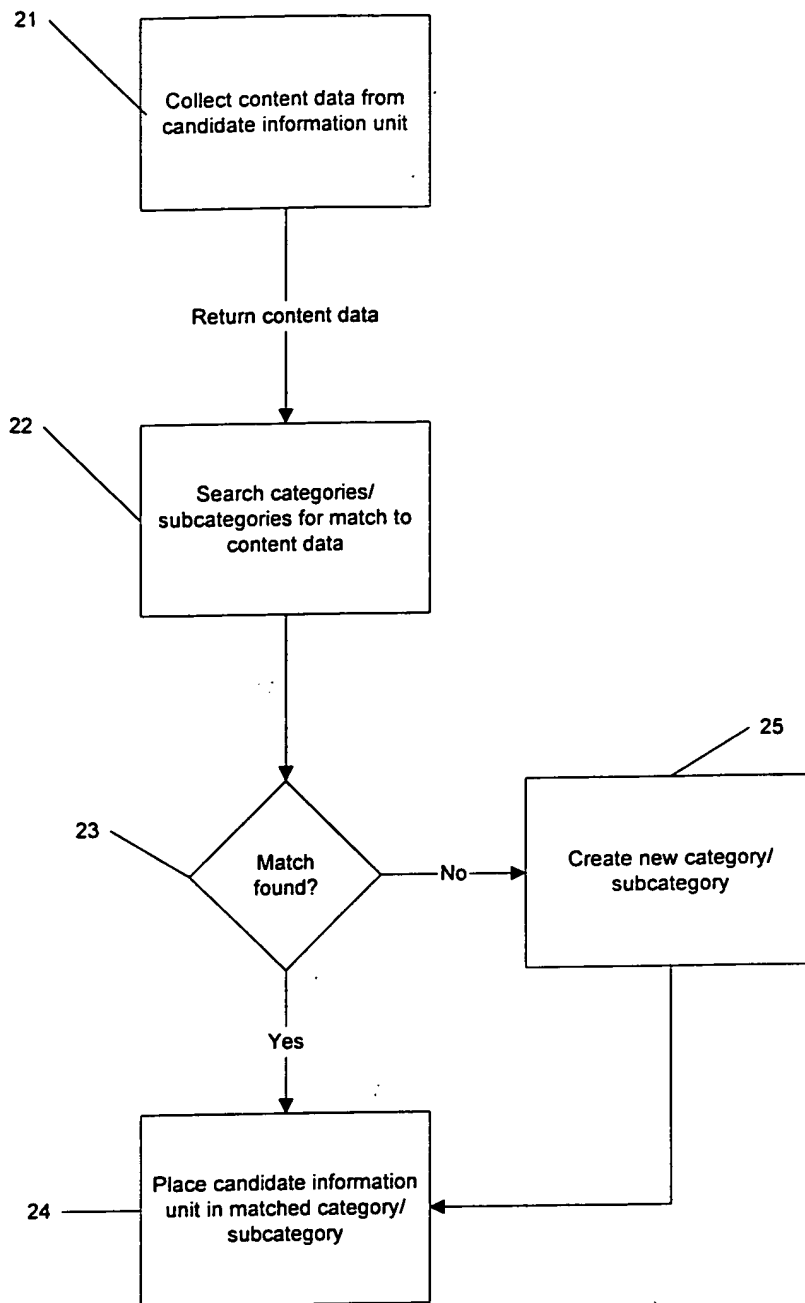

Figure 3

The diagram illustrates a hierarchical tree structure with the following components:

- First Level Folders:** There are 10 folders at this level, represented by rectangles with a tab on top. They are connected to the root by a vertical line on the left.
- Sub-Folders:** There are 6 sub-folders, represented by smaller rectangles with a tab on top. They are connected to their parent first-level folders by horizontal lines.
- Connections:** The root is a vertical line on the left. It branches out to the first-level folders. Some first-level folders further branch out to sub-folders, creating a nested structure.
